IADSS Crypto Scoreboard

Phone setup guide: install the app and turn on notifications

WHAT THIS APP DOES

The app watches six coins (BTC, ETH, SOL, BNB, JUP and HYPE) on the 4-hour and 1-hour charts. It shows you when a coin is getting close to a buy setup, and it can send a message to your phone when that happens.

Each coin has **three lights**. When all three are green, the coin is **READY**.

LIGHT	TURNS GREEN WHEN
Trend	The trend flips to blue
Stretch	The price is stretched low (a green stretch)
Stamp	A solid BUY stamp appears

The app address

https://iadss-dashboard.aldy.cloud

BEFORE YOU START

iPhone: you need iOS 16.4 or newer (Settings > General > About shows your version) and the **Safari** app. Chrome cannot install it on iPhone.
Android: use the **Chrome** app.

PART 1: INSTALL ON IPHONE

1. Open **Safari** and type the app address above.
2. Tap the **Share** button. It is the square with an arrow pointing up, at the bottom of the screen.
3. Scroll down the list and tap **Add to Home Screen**. If you cannot see it, tap **View More** at the bottom of the list.
4. The name shows as **IADSS**. Tap **Add** at the top right.
5. Close Safari. Find the new **IADSS** icon on your home screen and tap it. The app opens full screen, like any other app.

> **Important for iPhone:** always open the app from the home-screen icon. Notifications only work that way, not from a Safari page.

PART 1 (ALTERNATIVE): INSTALL ON ANDROID

1. Open **Chrome** and type the app address.
2. Tap the menu (three dots at the top right) and choose **Install app**. If you do not see it, choose **Add to Home screen**.
3. Tap **Install**, then open the **IADSS** icon.

PART 2: TURN ON NOTIFICATIONS

1. Open the app from the **home-screen icon**.
2. Tap **Notifications** at the top right of the screen.
3. Tap **Turn on**. Your phone asks for permission. Tap **Allow**.
4. Tap **Send test**. A message called "IADSS test" should arrive within a few seconds. If it does, you are all set.

PART 3: CHOOSE WHAT TO BE TOLD ABOUT

On the same Notifications screen, pick one of these:

CHOICE	YOU GET A MESSAGE
Every new light	Each time a light turns green on a coin you follow. This is the most messages.
2 of 3 and Ready	When a coin reaches 2 green lights, and again at 3 (Ready).
Ready only	Only when all 3 lights are green. This is the fewest messages.

You can also choose which **coins** and which **charts** (4H, 1H) to follow. Tap a name to switch it on (dark) or off (light). Your choices save automatically.

A red **EXIT** message always comes through for the coins and charts you follow. It means the three exit lights (trend orange, red stretch, sell stamp) are all lit.

Tap any notification to open that coin in the app.

HOW TO READ THE APP

TAB	WHAT YOU SEE
Overview	One tile per coin. The dots show how many lights are green: ●●○ means 2 of 3. Tap a tile for details.
Details	Pick a coin. A table compares its 4H and 1H charts side by side, light by light, with how long ago each one happened.
Closest to 3/3	A ranked list of the coins nearest to Ready, with the missing light named, for example "Waiting for: Solid BUY stamp".

"No alert" just means nothing has come in yet for that light. The app only hears from TradingView when something happens, so a light can stay empty for days. That is normal.

SOMETHING NOT WORKING?

PROBLEM	FIX
No "Turn on" button, or it says notifications are not available	You are inside a Safari page. Close it and open the app from the **home-screen icon**.
Nothing arrives after "Send test"	Go to **Settings > Notifications > IADSS** and switch **Allow Notifications** on. Also check that Focus or Do Not Disturb is off.
You tapped "Don't Allow" by mistake	Allow it in **Settings > Notifications > IADSS**, then close and reopen the app.
The app looks out of date	Swipe the app away in the app switcher, then open it again.
You want to stop messages	Open the app > Notifications > **Turn off**.
You changed phones	Install and turn on notifications again on the new phone. Each phone is set up separately.

This app only shows signals from TradingView. It does not place trades and it is not financial advice. Alerts in TradingView expire, so remember to renew them every month.
